

Correct me if I am wrong, but, ANYTHING that is broadcast over the PUBLICLLAY OWNED and operated airwaves is not capable of being considered owned. That is how you as a consumer are allowed to record video cassetts. This does not allow you to reproduce for profit.

Now, where in there does it allow anyone to transmit over PUBLIC airwaves to be encrypted. Only to be decrypted with proprietary hardware. Seems to me, that since I am a member of the public, I should be paid to use such encoding.

Just my \$.02
